# Homomorphisms on Lattices of Measures 

${ }^{1}$ Norris Sookoo and ${ }^{2}$ Peter Chami<br>${ }^{1}$ University of Trinidad and Tobago, O'meara, Arima, Trinidad, West Indies<br>${ }^{2}$ Department of Computer Science, Mathematics and Physics, University of the West Indies, Cave Hill, Barbados, West Indies

#### Abstract

Problem statement: Homomorphisms on lattices of measures defined on the quotient spaces of the integers were considered. These measures were defined in terms of Sharma-Kaushik partitions. The homomorphisms were studied in terms of their relationship with the underlying Sharma-Kaushik partitions. Approach: We defined certain mappings between lattices of SharmaKaushik partitions and showed that they are homomorphisms. These homomorphisms were mirrored in homorphisms between related lattices of measures. Results: We obtained the structure of certain homomorphisms of measures. Conclusion: Further information about homomorphisms between lattices of measures of the type considered here can be obtained by investigating the underlying lattices of Sharma-Kaushik partitions.

Key words: Measure, lattice, ideal, partition

## INTRODUCTION

Systems of measures having different structures and properties have long been the subject of investigation. Maharam ${ }^{[5]}$ studied a family of measures with orthogonality properties and Schmidt ${ }^{[8]}$ proved that a particular ordered Banach space of vector measures is a Banach lattice. Systems of measures satisfying compatibility conditions were studied by Niederreiter and Sookoo ${ }^{[6,7]}$, who obtained conditions under which a partial density can be extended to a density. Sookoo and Chami ${ }^{[9]}$ investigated the lattice structure of certain sets of lattices of measures defined on the quotient spaces of the integers.

We consider mappings that preserve certain elements of the structure of lattices of such measures, namely homomorphisms. We investigate some of the forms that homomorphosms may take.

The measures that we consider are defined in terms of SK-partitions of the ring of integer's module q. The studies of these partitions have been conducted by Kaushik ${ }^{[2-4]}$.

We consider homomorphosms given in terms of a function defined on the class sizes of the underlying partitions. Later, we consider homomorphisms that change the number of classes or alter class sizes in a pre-determined manner.

## Definitions and notations:

Notation: Let $\mathrm{F}_{\mathrm{q}}=\{0,1, \ldots, \mathrm{q}-1\}$ be the ring of integers modulo $q, q \in\{2,3, \ldots\}$.

Definition: Given $\mathrm{F}_{\mathrm{q}}, \quad \mathrm{q} \geq 2$, a partition $\mathrm{P}=\left\{\mathrm{B}_{0}, \mathrm{~B}_{1}, \ldots, \mathrm{~B}_{\mathrm{m}-1}\right\}$ of $\mathrm{F}_{\mathrm{q}}$ is called an SK-partition if:

- $B_{0}=\{0\}$ and $q-a \in B_{i}$ if $a \in B_{i}, i=1,2, \ldots, m_{-1}$
- If $a \in B_{i}$ and $b \in B_{j} ; i, j=0,1, \ldots, m-1$ and if $j$ precedes i in the order of the partition P , (written as $i>j$ ), then $\min \{a, q-a\}>\min \{b, q-b\}$.
- If $\mathrm{i}>\mathrm{j},(\mathrm{i}, \mathrm{j} \in\{0,1, \ldots, \mathrm{~m}-1\})$ and $\mathrm{i} \neq \mathrm{m}-1$, then:

$$
\left|\mathrm{B}_{\mathrm{i}}\right| \geq\left|\mathrm{B}_{\mathrm{j}}\right| \text { and }\left|\mathrm{B}_{\mathrm{m}-1}\right| \geq \frac{1}{2}\left|\mathrm{~B}_{\mathrm{m}-2}\right|
$$

where, $\left|B_{i}\right|$ stands for the size of the set $B_{i}$

Notation: A partition $\mathrm{B}=\left\{\mathrm{B}_{0}, \mathrm{~B}_{1}, \ldots, \mathrm{~B}_{\mathrm{m}-1}\right\}$ is denoted by $B=\left(\left(1, b_{1}, b_{2}, \ldots, b_{m-1}\right)\right)$ where $b_{i}=\left|B_{i}\right|, i=1,2, \ldots, m-1$.

Notation: $\mathfrak{I}_{\mathrm{P}}$ is the set of all SK-partitions.
The concept of an ideal is well known in lattice theory, Birkhoff ${ }^{[1]}$.

Corresponding Author: Peter Chami, Department of Computer Science, Mathematics and Physics, University of the West Indies, Cave Hill, Barbados, West Indies

Definition: Let ( $\mathrm{L}, \leq$ ) be a lattice. A subset A of L is called an ideal, if:

- $a, b \in A \Rightarrow a \vee b \in A$
- $a \in A$ and $c \in L \ni c \leq a \Rightarrow c \in A$

Notation: Z/qZ is the quotient group of integers modulo q with the discrete topology.

Definition: Given a partition P of $\mathrm{F}_{\mathrm{q}}$, we define a measure $\mu_{\mathrm{P}}$ on $\mathrm{Z} / \mathrm{qZ}$ as follows:

$$
\mu_{\mathrm{P}}(\mathrm{i}+\mathrm{qZ})=\mathrm{j}, \text { if } \mathrm{i} \in \mathrm{~B}_{\mathrm{j}}, \mathrm{i}=0,1, \ldots, \mathrm{q}-1
$$

Note: In this study, the SK-partitions that we consider must satisfy the condition that for each partition the class sizes never decrease as the subscript of the classes increases.

Definition: We define the class-size ordering $\leq_{s}$ on $\mathfrak{I}_{\mathrm{P}}$ as follows. For elements P and Q of $\mathfrak{I}_{\mathrm{P}}{ }^{\ni}$ :

$$
\mathrm{P}=\left\{\mathrm{B}_{0}, \mathrm{~B}_{1}, \ldots, \mathrm{~B}_{\mathrm{m}-1}\right\}
$$

And:

$$
\mathrm{Q}=\left\{\mathrm{C}_{0}, \mathrm{C}_{1}, \ldots, \mathrm{C}_{\mathrm{m}^{\prime}-1}\right\} ; \mathrm{m}, \mathrm{~m}^{\prime} \in\{2,3,4, \ldots\}
$$

Where:
$P=$ An SK-partition of $F_{q}$
$Q=$ An SK-partition of $F_{q^{\prime}} ; q, q^{\prime} \in\{2,3, \ldots\} ; q, q^{\prime} \in\{2,3, \ldots\}$
$\mathrm{P} \leq_{\mathrm{s}} \mathrm{Q} \Leftrightarrow\left\{\mathrm{m} \leq \mathrm{m}^{\prime}\right.$ and the number of elements of $\mathrm{F}_{\mathrm{q}}$ of weight $\omega$ with respect to $\mathrm{P} \leq$ the number of elements of $F_{q^{\prime}}$ of weights $\omega$ with respect to $\left.Q, \omega=0,1, \ldots, m-1\right\}$.

Definition: Let $\mu_{\mathrm{P}}$ be a measure on $\mathrm{Z} / \mathrm{qZ}$ and $\mu_{\mathrm{Q}}$ be a measure on $\mathrm{Z} / \mathrm{q}^{\prime} \mathrm{Z}$, where:

$$
\mathrm{P}=\left\{\mathrm{B}_{0}, \mathrm{~B}_{1}, \ldots, \mathrm{~B}_{\mathrm{m}-1}\right\}
$$

is an SK-partition of $\mathrm{F}_{\mathrm{q}}$ and:

$$
\mathrm{Q}=\left\{\mathrm{C}_{0}, \mathrm{C}_{1}, \ldots, \mathrm{C}_{\mathrm{m}^{\prime}}-1\right\}
$$

is an SK-partition of $\mathrm{F}_{q^{\prime}}$. Also, let $\mathrm{M}_{\mathrm{P}}=\left\{\mu_{\mathrm{P}} \mid \mathrm{P} \in \mathfrak{I}\right\}$. We define an ordering on $M_{P}$ as follows: For $\mu_{P}, \mu_{Q} \in M_{P}$.
$\mu_{\mathrm{P}} \leq_{\mu} \mu_{\mathrm{Q}} \Leftrightarrow$ \{number of elements of $\mathrm{Z} / \mathrm{qZ}$ of measure $j \leq$ number of elements of $Z / q^{\prime} Z$ of measure $j$ $j=0,1, \ldots, m-1\}$.

Note: Clearly:

$$
\mu_{\mathrm{P}} \leq \mu_{\mathrm{Q}} \Leftrightarrow \mathrm{P} \leq_{\mathrm{S}} \mathrm{Q}
$$

Remark: Clearly, from the above definition $\mathrm{P} \leq_{\mathrm{s}} \mathrm{Q} \Leftrightarrow\left|\mathrm{B}_{\mathrm{i}}\right| \leq\left|\mathrm{C}_{\mathrm{i}}\right|, \mathrm{i}=0,1, \ldots, \mathrm{~m}-1$.

Note: $\leq_{\mathrm{s}}$ is a partial ordering on $\mathfrak{I}_{\mathrm{p}}$.
Note: Le $\mathrm{m} \leq \mathrm{m}^{\prime}$ and:

$$
A=\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right), B=\left(\left(1, b_{1}, b_{2}, \ldots, b_{m^{\prime}-1}\right)\right) .
$$

It is easy to show that:
$A \vee B=$
$\left(\left(1, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}\right.\right.$,
$\left.\left.\max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}\right)\right)$
$A \wedge B=\left(\left(1, \min \left\{a_{1}, b_{1}\right\}, \min \left\{a_{2}, b_{2}\right\}, \ldots, \min \left\{a_{m-1}, b_{m-1}\right\}\right)\right)$,
and that $\left(\mathfrak{I}_{\mathrm{P}}, \leq_{s}\right)$ is a lattice.

## MATERIALS AND METHODS

## Function on the class sizes:

Theorem 1: Let $\phi_{\mathrm{f}}: \mathfrak{I}_{\mathrm{P}} \rightarrow \mathfrak{I}_{\mathrm{P}}$ be defined by:

$$
\phi_{f}\left[\left(\left(1, g_{1}, g_{2}, \ldots, g_{m-1}\right)\right)\right]=\left(\left(1, f\left(g_{1}\right), f\left(g_{2}\right), \ldots, f\left(g_{m-1}\right)\right)\right)
$$

for any element $\left(\left(1, g_{1}, g_{2}, \ldots, g_{m-1}\right)\right)$ of $\mathfrak{I}_{p}$, where $\mathrm{m} \in\{2,3 \ldots\}$ and f is a function from $\{2,4,6, \ldots\}$ to $\{2,4,6, \ldots\}$.
$\phi_{f}$ is a lattice homomorphism if and only if f is nondecreasing.

Proof: Let $\phi_{\mathrm{f}}$ be a lattice homomorphism on $\mathfrak{J}_{\mathrm{P}}$ and let:
$\mathrm{A}, \mathrm{B} \in \mathfrak{I}_{\mathrm{P}}{ }^{\ni}$
$\mathrm{A}=\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)$
$B=\left(\left(1, b_{1}, b_{2}, \ldots, b_{m^{\prime}-1}\right)\right)$
where, $\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}$ are fixed, positive, even integers. We assume, without loss of generality, that $\mathrm{m} \leq \mathrm{m}$.

Now:

$$
\begin{aligned}
\phi_{\mathrm{f}} & (\mathrm{~A} \vee \mathrm{~B})=\phi_{\mathrm{f}}(\mathrm{~A}) \vee \phi_{\mathrm{f}}(\mathrm{~B}) \\
\therefore & \phi_{\mathrm{f}}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \vee\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right] \\
= & \left\{\phi\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)\right]\right\} \vee\left\{\phi_{\mathrm{f}}\left[\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right]\right\} \\
& \therefore \phi_{\mathrm{f}}\left[\left(\left(1, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\},\right.\right.\right. \\
& \left.\left.\left.\max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}\right)\right)\right] \\
= & \left(\left(1, \mathrm{f}\left(\mathrm{a}_{1}\right), \mathrm{f}\left(\mathrm{a}_{2}\right), \ldots, \mathrm{f}\left(\mathrm{a}_{\mathrm{m}-1}\right)\right)\right) \vee\left(\left(1, \mathrm{f}\left(\mathrm{~b}_{1}\right), \mathrm{f}\left(\mathrm{~b}_{2}\right), \ldots, \mathrm{f}\left(\mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right) \\
& \therefore \mathrm{f}\left[\max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}\right]=\max \left\{\mathrm{f}\left(\mathrm{a}_{1}\right), \mathrm{f}\left(\mathrm{~b}_{1}\right)\right\} \\
& \therefore \mathrm{a}_{1} \geq \mathrm{b}_{1} \Rightarrow \mathrm{f}\left(\mathrm{a}_{1}\right)=\max \left\{\mathrm{f}\left(\mathrm{a}_{1}\right), \mathrm{f}\left(\mathrm{~b}_{1}\right)\right\} \\
\Rightarrow & \mathrm{f}\left(\mathrm{a}_{1}\right) \geq \mathrm{f}\left(\mathrm{~b}_{1}\right)
\end{aligned}
$$

Since $a_{1}$ and $b_{1}$ are arbitrary, $f$ is non-decreasing. Let $f$ be non-decreasing. $\phi_{f}$ is clearly a function. Also:

$$
\begin{aligned}
& \phi_{f}(A \vee B)=\phi_{f}\left[\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right) \vee\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right] \\
& =\phi_{\mathrm{f}}\left[1, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\},\right. \\
& \left.\left.\left.=\max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}\right)\right)\right] \\
& =\left(\left(1, f\left(\max \left\{a_{1}, b_{1}\right\}\right), f\left(\max \left\{a_{2}, b_{2}\right\}\right), \ldots\right.\right. \text {, } \\
& f\left(\max \left\{a_{m-1}, b_{m-1}\right\}\right), f\left(\max \left\{a_{m-1}, b_{m}\right\}\right), \\
& \left.\left.f\left(\max \left\{a_{m-1}, b_{m+1}\right\}\right), \ldots, f\left(\max \left\{a_{m-1}, b_{m-1}\right\}\right)\right)\right) \\
& =\left(\left(1, \max \left\{\mathrm{f}\left(\mathrm{a}_{1}\right), \mathrm{f}\left(\mathrm{~b}_{1}\right)\right\}, \max \left\{\mathrm{f}\left(\mathrm{a}_{2}\right), \mathrm{f}\left(\mathrm{~b}_{2}\right)\right\}, \ldots,\right.\right. \text {, } \\
& \max \left\{\mathrm{f}\left(\mathrm{a}_{\mathrm{m}-1}\right), \mathrm{f}\left(\mathrm{~b}_{\mathrm{m}-1}\right)\right\}, \max \left\{\mathrm{f}\left(\mathrm{a}_{\mathrm{m}-1}\right), \mathrm{f}\left(\mathrm{~b}_{\mathrm{m}}\right)\right\}, \\
& \left.\left.=\max \left\{\mathrm{f}\left(\mathrm{a}_{\mathrm{m}-1}\right), \mathrm{f}\left(\mathrm{~b}_{\mathrm{m}+1}\right)\right\}, \ldots, \max \left\{\mathrm{f}\left(\mathrm{a}_{\mathrm{m}-1}\right), \mathrm{f}\left(\mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right\}\right)\right) \\
& =\left(\left(1, \mathrm{f}\left(\mathrm{a}_{1}\right), \mathrm{f}\left(\mathrm{a}_{2}\right), \ldots, \mathrm{f}\left(\mathrm{a}_{\mathrm{m}-1}\right)\right)\right) \vee \\
& \left(\left(1, \mathrm{f}\left(\mathrm{~b}_{1}\right), \mathrm{f}\left(\mathrm{~b}_{2}\right), \ldots, \mathrm{f}\left(\mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right) \\
& =\left[\phi_{\mathrm{f}}(\mathrm{~A})\right] \vee\left[\phi_{\mathrm{f}}(\mathrm{~B})\right]
\end{aligned}
$$

In almost the same ay, we can show that:

$$
\phi_{\mathrm{f}}(\mathrm{~A} \wedge \mathrm{~B})=\left[\phi_{\mathrm{f}}(\mathrm{~A})\right] \wedge\left[\phi_{\mathrm{f}}(\mathrm{~B})\right]
$$

Hence $\phi_{f}$ is a lattice homorphism from $\mathfrak{I}_{\mathrm{P}}$ to $\mathfrak{I}_{\mathrm{P}}$.
Corollary 2: Define $\psi_{\mathrm{f}}: \mu_{\mathrm{P}} \rightarrow \mu_{\mathrm{P}}$ by:

$$
\psi_{\mathrm{f}}\left[\left(\left(1, \mathrm{~g}_{1}, \mathrm{~g}_{2} \ldots, \mathrm{~g}_{\mathrm{m}-1}\right)\right)_{\mu}\right]=\left(\left(1, \mathrm{f}\left(\mathrm{~g}_{1}\right), \mathrm{f}\left(\mathrm{~g}_{2}\right), \ldots, \mathrm{f}\left(\mathrm{~g}_{\mathrm{m}-1}\right)\right)\right)_{\mu}
$$

for any element $\left(\left(1, g_{1}, g_{2}, \ldots g_{m-1}\right)\right)_{\mu}$ of $M_{\mathrm{P}} . \psi_{\mathrm{f}}$ is a lattice homomorphism iff f is non-decreasing.

Inserting classes:
Theorem 3: Let:

$$
\begin{aligned}
& \mathrm{f}_{\mathrm{r}}: \mathfrak{I}_{\mathrm{P}} \rightarrow \mathfrak{I}_{\mathrm{P}} \ni \mathrm{f}_{\mathrm{r}}\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \\
& =\left(\left(1,2,2, \ldots, 2, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \\
& \quad \leftarrow \mathrm{rtwos} \rightarrow
\end{aligned}
$$

for any element $\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right)$ of $\mathfrak{I}_{\mathrm{P}}$, where r is a fixed, arbitrary element of $\{1,2, \ldots,\} \ni r \leq m-1$.
$\mathrm{f}_{\mathrm{r}}$ is a homomorphism on $\mathfrak{I}_{\mathrm{P}}$.
Proof: $f_{r}$ is clearly a function.
Let:

## $\mathrm{A}, \mathrm{B} \in \mathfrak{I}_{\mathrm{P}}{ }^{\text { }}$

$A=\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right)$
$B=\left(\left(1, b_{1}, b_{2}, \ldots, b_{m^{\prime}-1}\right)\right)$

For fixed, arbitrary numbers $m, m^{\prime} \in\{2,3, \ldots\}$ э $\mathrm{m} \leq \mathrm{m}$.

We show that:

$$
\begin{aligned}
& \mathrm{f}_{\mathrm{r}}(\mathrm{~A} \vee B)=\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~A})\right] \vee\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~B})\right] \\
& \mathrm{f}_{\mathrm{r}}(\mathrm{~A} \vee B)=\mathrm{f}_{\mathrm{r}}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \vee\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right] \\
& =\mathrm{f}_{\mathrm{r}}\left[\left(\left(1, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\},\right.\right.\right. \\
& \\
& \left.\left.\left.\quad \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}\right)\right)\right] \\
& = \\
& \left(1,2,2, \ldots, 2, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{2}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots\right. \\
& \\
& \quad \leftarrow \mathrm{rtwos} \rightarrow \\
& \\
& \quad \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \\
& \\
& \left.\left.\quad \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}\right)\right) \\
& = \\
& \left(\left(1,2,2, \ldots, 2, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \vee \\
& \\
& \leftarrow \mathrm{rtwos} \rightarrow \\
& \\
& \\
& \left(\left(1,2,2, \ldots, 2, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right) \\
& \\
& \quad \leftarrow \mathrm{rtwos} \rightarrow
\end{aligned}
$$

$$
\begin{equation*}
=\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~A})\right] \vee\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~B})\right] \tag{1}
\end{equation*}
$$

We now prove that:

$$
\begin{aligned}
& \mathrm{f}_{\mathrm{r}}(\mathrm{~A} \wedge B)=\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~A})\right] \wedge\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~B})\right] \\
& \left.\mathrm{f}_{\mathrm{r}}(\mathrm{~A} \wedge B)=\mathrm{f}_{\mathrm{r}}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \wedge\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right]
\end{aligned}
$$

$$
\begin{align*}
= & \mathrm{f}_{\mathrm{r}}\left[\left(\left(1, \min \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \min \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots,\right.\right.\right. \\
& \left.\left.\left.\min \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}\right)\right)\right] \\
= & \left(\left(1,2,2, \ldots, 2, \min \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \min \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots\right.\right. \\
& \leftarrow \mathrm{rtwos} \rightarrow \\
& \left.\left.\min \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}\right)\right) \\
= & \left(\left(1,2,2, \ldots, 2, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \wedge \\
& \left(\left(1,2,2, \ldots, 2, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}-1}\right)\right) \\
& {\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~A})\right] \wedge\left[\mathrm{f}_{\mathrm{r}}(\mathrm{~B})\right] } \tag{2}
\end{align*}
$$

From (1) and (2), we conclude that $f_{r}$ is a lattice homomorphism.

Remark: $f_{r}$ maps an element of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}$ to an element of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}+\mathrm{r}}$ for each $\mathrm{m} \in\{2,3, \ldots\}$.

Corollary 4: Define $\varphi_{\mathrm{f}_{\mathrm{r}}}: \mathrm{M}_{\mathrm{P}} \rightarrow \mathrm{M}_{\mathrm{P}}$ by:

$$
\begin{aligned}
\varphi_{\mathrm{f}_{\mathrm{r}}}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu}\right]= & \left(\left(1,2,2, \ldots, 2, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu} \\
& \leftarrow \mathrm{rtwos} \rightarrow
\end{aligned}
$$

for any $\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right)_{\mu} \in M_{P}$, where $r$ is a fixed arbitrary natural number $\ni \mathrm{r} \leq \mathrm{m}-1$.
$\varphi_{\mathrm{f}_{\mathrm{r}}}$ is a homomorphism on $\mathrm{M}_{\mathrm{P}}$.

## Increasing class sizes:

Theorem 5: Let $h_{1}, h_{2}, \ldots, h_{m-1}$ be elements of $\{0, \pm 2, \pm 4, \ldots$,$\} and let:$

$$
\begin{aligned}
\mathfrak{I}_{\mathrm{P}, \mathrm{~m}}^{s}= & \left\{\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \in \mathfrak{I}_{\mathrm{P}, \mathrm{~m}} \mid\right. \\
& \left.2 \leq \mathrm{a}_{1}+\mathrm{h}_{1} \leq \mathrm{a}_{2}+\mathrm{h}_{2} \leq \ldots \leq \mathrm{a}_{\mathrm{m}-1}+\mathrm{h}_{\mathrm{m}-1}\right\}
\end{aligned}
$$

Then $\left(\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{\mathrm{s}} \leq_{\mathrm{s}}\right)$ is a sublattice of $\left(\mathfrak{I}_{\mathrm{P}, \mathrm{m}}, \leq_{\mathrm{s}}\right)$.
Proof: We prove that the g.l.b. and the l.u.b. of two arbitrary elements of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{s}$ are also in $\mathfrak{J}_{\mathrm{P}, \mathrm{m}}^{\mathrm{s}}$.

Let A and B be two arbitrary elements of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{s} \ni$ :

$$
\mathrm{A}=\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)
$$

And:

$$
\mathrm{B}=\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}-1}\right)\right)
$$

$A \vee B=\left(\left(1, \max \left\{a_{1}, b_{1}\right\}, \max \left\{a_{2}, b_{2}\right\}, \ldots, \max \left\{a_{m-1}, b_{m-1}\right\}\right)\right)$

Now, since $A, B \in \mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{s}$ :

$$
2 \leq \mathrm{a}_{1}+\mathrm{h}_{1} \leq \mathrm{a}_{2}+\mathrm{h}_{2} \leq \ldots \leq \mathrm{a}_{\mathrm{m}-1}+\mathrm{h}_{\mathrm{m}-1}
$$

And:

$$
\begin{aligned}
& 2 \leq \mathrm{b}_{1}+\mathrm{h}_{1} \leq \mathrm{b}_{2}+\mathrm{h}_{2} \leq \ldots \leq \mathrm{b}_{\mathrm{m}-1}+\mathrm{h}_{\mathrm{m}-1} \\
& \therefore 2 \leq \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}+\mathrm{h}_{1} \leq \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}+\mathrm{h}_{2} \leq \\
& \ldots \leq \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}+\mathrm{h}_{\mathrm{m}-1}
\end{aligned}
$$

$$
\begin{equation*}
\mathrm{A} \vee \mathrm{~B} \in \mathfrak{I}_{\mathrm{P}, \mathrm{~m}}^{s} \tag{3}
\end{equation*}
$$

Similarly:
$A \wedge B \in \mathfrak{I}_{P, m}^{s}$

From (3) and (4), we see that $\left(\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{\mathrm{s}}, \leq_{\mathrm{s}}\right)$ is a sublattice of $\left(\mathfrak{I}_{\mathrm{P}, \mathrm{m}}, \leq_{\mathrm{s}}\right)$.

Corollary 6: Let $\mathrm{h}_{1}, \mathrm{~h}_{2}, \ldots \mathrm{~h}_{\mathrm{m}-1}$ be elements $\{0, \pm 2, \pm 4, \ldots\}$ :

$$
\mathrm{M}_{\mathrm{P}, \mathrm{~m}}=\left\{\mu_{\mathrm{P}} \mid \mathrm{P} \in \mathfrak{I}_{\mathrm{P}, \mathrm{~m}}\right\}
$$

And:

$$
\begin{gathered}
\mathrm{M}_{\mathrm{P}, \mathrm{~m}}^{\mathrm{s}}=\left\{\mu_{\mathrm{P}} \mid \mathrm{P} \in \mathfrak{I}_{\mathrm{P}, \mathrm{~m}}^{\mathrm{s}}\right\} \\
\left(\mathrm{M}_{\mathrm{P}, \mathrm{~m}}^{\mathrm{s}} \leq_{\mu}\right)
\end{gathered}
$$

is a sublattice of $\left(\mathrm{M}_{\mathrm{P}, \mathrm{m}}, \leq \mu\right)$.
Theorem 7: Let $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{\mathrm{s}}, \mathrm{h}_{1}, \mathrm{~h}_{2}, \ldots \ldots ., \mathrm{h}_{\mathrm{m}-1}$ be as in the previous theorem.

Also, let $\mathrm{g}: \mathfrak{J}_{\mathrm{P}, \mathrm{m}}^{s} \rightarrow \mathfrak{I}_{\mathrm{P}, \mathrm{m}}$ be defined by:

$$
\mathrm{g}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)\right]=\left(\left(1, \mathrm{a}_{1}+\mathrm{h}_{1}, \mathrm{a}_{2}+\mathrm{h}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}+\mathrm{h}_{\mathrm{m}-1}\right)\right)
$$

for any element $\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right)$ of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{s}$. g is a lattice homomorphism.

Proof: Clearly $g$ is a function that maps elements of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{\mathrm{s}}$ to elements of $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}$.

We show that $g$ is a homomorphism.
Let:

$$
\begin{gathered}
\mathrm{A}, \mathrm{~B} \in \mathfrak{I}_{\mathrm{P}, \mathrm{~m}}^{\mathrm{s}} \ni \\
\mathrm{~A}=\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots ., \mathrm{a}_{\mathrm{m}-1}\right)\right)
\end{gathered}
$$

And:

$$
\begin{aligned}
& B=\left(\left(1, b_{1}, b_{2}, \ldots \ldots, b_{m-1}\right)\right) \\
& g(A \vee B)= g\left[\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right) \vee\left(\left(1, b_{1}, b_{2}, \ldots, b_{m-1}\right)\right)\right] \\
&=\left(\left(1, \max \left\{a_{1}, b_{1}\right\}+h_{1}, \max \left\{a_{2}, b_{2}\right\}+h_{2}, \ldots .,\right.\right. \\
&\left.\left.\max \left\{a_{m-1}, b_{m-1}\right\}+h_{m-1}\right)\right) \\
&=\left(\left(1, a_{1}+h_{1}, a_{2}+h_{2}, \ldots, a_{m-1}+h_{m-1}\right)\right) \vee \\
&\left(\left(1, b_{1}+h_{1}, b_{2}+h_{2}, \ldots ., b_{m-1}+h_{m-1}\right)\right) \\
&= {[g(A)] \vee[g(B)] }
\end{aligned}
$$

Similarly, it can be shown that:

$$
\mathrm{g}(\mathrm{~A} \wedge \mathrm{~B})=[\mathrm{g}(\mathrm{~A})] \wedge[\mathrm{g}(\mathrm{~B})]
$$

Hence g is a lattice homomorphism on $\mathfrak{I}_{\mathrm{P}, \mathrm{m}}^{s}$.

Remark: If $h_{1}, h_{2}, \ldots h_{m-1}$ are non-negative, even integers and $h_{1} \leq h_{2} \leq \ldots \leq h_{m-1}$, then $\mathfrak{J}_{\mathrm{P}, \mathrm{m}}^{\mathrm{s}}=\mathfrak{I}_{\mathrm{P}, \mathrm{m}}$ and g is a lattice endomorphism.

Corollary 8: Let $h_{1}, h_{2}, \ldots, h_{m-1}, M_{P, m}$ and $M_{P, m}^{s}$ be as in Theorem 7 and Corollary 6.

Define:

$$
\varphi_{\mathrm{g}}: \mathrm{M}_{\mathrm{P}, \mathrm{~m}}^{\mathrm{s}} \rightarrow \mathrm{M}_{\mathrm{P}, \mathrm{~m}}
$$

By:

$$
\varphi_{\mathrm{g}}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu}\right]=\left(\left(1, \mathrm{a}_{1}+\mathrm{h}_{1}, \mathrm{a}_{2}+\mathrm{h}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}+\mathrm{h}_{\mathrm{m}-1}\right)\right)_{\mu}
$$

for any element $\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right)_{\mu}$ of $M_{P, m}^{s} . \varphi_{g}$ is a lattice homomorphism.

Selecting classes:
Notation: Let:

$$
\mathfrak{I}_{\mathrm{P}, \geq \mathrm{e}}=\left\{\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \in \mathfrak{I}_{\mathrm{P}} \mid \mathrm{m} \geq \mathrm{e}\right\}
$$

where, $\mathrm{e} \in\{2,3, \ldots$.$\} .$

Remark: Clearly $\mathfrak{J}_{\mathrm{P}, \geq \mathrm{e}}$ is a sublattice of $\mathfrak{J}_{\mathrm{P}}$; for if $A, B \in \mathfrak{J}_{\mathrm{P}, \geq \mathrm{e}}$ then $\mathrm{A} \vee \mathrm{B}$ and $\mathrm{A} \wedge \mathrm{B}$ would each have at least e classes and so $A \vee B, A \wedge B \in \mathfrak{I}_{P, \geq e^{c}}$.

Theorem 9: Let $i_{1}, i_{2}, \ldots i_{r-1}$ be fixed, arbitrary, natural numbers $\ni \mathrm{i}_{1} \leq \mathrm{i}_{2} \leq \ldots \leq \mathrm{i}_{\mathrm{r}-1}$ and let U be a mapping on:

$$
\begin{aligned}
\mathfrak{I}_{\mathrm{P}, 2 \mathrm{i}_{\mathrm{r}-1}} \ni \mathrm{U}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)\right]= & \left(\left(1, \mathrm{a}_{\mathrm{i}_{1}}, \mathrm{a}_{\mathrm{i}_{2}}, \ldots, \mathrm{a}_{\mathrm{i}_{-1}}\right)\right) \\
& \forall\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \in \mathfrak{I}_{\mathrm{P}, \mathrm{i}_{\mathrm{i}-1}}
\end{aligned}
$$

U is a homomorphism from $\mathfrak{I}_{\mathrm{P}, \mathrm{i}_{\mathrm{i}-1}}$ to $\mathfrak{I}_{\mathrm{P}, \mathrm{r}}$.
Proof: U is clearly a function.
Also, for any element:

$$
\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \text { of } \mathfrak{I}_{\mathrm{P}, \geq \mathrm{i}_{\mathrm{r}-1}}
$$

$$
\mathrm{U}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)\right]=\left(\left(1, \mathrm{a}_{\mathrm{i}_{1}}, \mathrm{a}_{\mathrm{i}_{2}}, \ldots, \mathrm{a}_{\mathrm{i}_{-1}}\right)\right) \in \mathfrak{I}_{\mathrm{P}, \mathrm{r}}
$$

Since:

$$
a_{i_{1}} \leq a_{i_{2}} \leq \ldots \leq a_{i_{1-1}-1}
$$

$\therefore \mathrm{U}$ is a function from $\mathfrak{I}_{\mathrm{P}, \geq \mathrm{i}_{\mathrm{r}-1}}$ to $\mathfrak{I}_{\mathrm{P}, \mathrm{r}}$.
Now, let $A, B \in \mathfrak{I}_{P, 2 i_{r-1}} \ni$ :
$\mathrm{A}=\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}^{\prime}-1}\right)\right)$
$B=\left(\left(1, b_{1}, b_{2}, \ldots, b_{m^{\prime \prime}-1}\right)\right)$

For numbers:

$$
\begin{aligned}
& \mathrm{m}^{\prime}, \mathrm{m}^{\prime \prime} \in\left\{\mathrm{i}_{\mathrm{r}-1}, \mathrm{i}_{\mathrm{r}-1}+1, \mathrm{i}_{\mathrm{r}-1}+2, \ldots,\right\} \\
& \ni \mathrm{m}^{\prime} \leq \mathrm{m}^{\prime \prime} \\
& \mathrm{U}(\mathrm{~A} \vee \mathrm{~B})= \mathrm{U}\left(\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}^{\prime}-1}\right)\right) \vee\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right]\right. \\
&= \mathrm{U}\left[\left(\left(1, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\}, \ldots,\right.\right.\right. \\
& \max \left\{\mathrm{a}_{\mathrm{m}^{\prime}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}^{\prime}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}}\right\}, \\
&\left.\left.\left.\max \left\{\mathrm{a}_{\mathrm{m}^{\prime}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}^{\prime}-1}, \mathrm{~b}_{\mathrm{m}^{\prime \prime}-1}\right\}\right)\right)\right] \\
&=\left(\left(1, \max \left\{\mathrm{a}_{\mathrm{i}_{1}}, \mathrm{~b}_{\mathrm{i}_{1}}\right\},\right.\right. \\
&\left.\left.\max \left\{\mathrm{a}_{\mathrm{i}_{2}}, \mathrm{~b}_{\mathrm{i}_{2}}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{i}_{\mathrm{r}-1}}, \mathrm{~b}_{\mathrm{i}_{\mathrm{r}-1}}\right\}\right)\right) \\
&=\left(\left(1, \mathrm{a}_{\mathrm{i}_{1}}, \mathrm{a}_{\mathrm{i}_{2}}, \ldots, \mathrm{a}_{\mathrm{i}_{-1}}\right)\right) \vee\left(\left(1, \mathrm{~b}_{\mathrm{i}_{1}}, \mathrm{~b}_{\mathrm{i}_{2}}, \ldots, \mathrm{~b}_{\mathrm{i}_{-1}-1}\right)\right) \\
&= {[\mathrm{U}(\mathrm{~A})] \vee[\mathrm{U}(\mathrm{~B})] }
\end{aligned}
$$

Similarly $U(A \wedge B)=[U(A)] \wedge[U(B)]$.
Hence $U$ is a lattice homomorphism on $\mathfrak{I}_{P, 2 i_{r-1}}$.
Notation: Let $M_{P, \geq e}=\left\{\mu_{P} \mid P \in \mathfrak{J}_{P, \geq e}\right\}$ where $e \in\{2,3, \ldots\}$.
Remark: $M_{P, \geq e}$ is a sublattice of $M_{P}$.
Corollary 10: Let $i_{1}, i_{2}, \ldots, i_{r-1}$ be as in Theorem 9 and let $\psi_{\mu}$ be a mapping on:

$$
\begin{aligned}
& \mathrm{M}_{\mathrm{P}, \mathrm{i}_{\mathrm{r}-1}} \ni \psi_{\mu}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu}\right] \\
& =\left(\left(1, \mathrm{a}_{\mathrm{i}_{1}}, \mathrm{a}_{\mathrm{i}_{2}}, \ldots, \mathrm{a}_{\mathrm{i}_{\mathrm{r}-1}}\right)\right)_{\mu} \forall\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu} \in \mathrm{M}_{\mathrm{P}, \mathrm{i}_{\mathrm{r}-1}}
\end{aligned}
$$

$\psi_{\mu}$ is a homomorphism from $\mathrm{M}_{\mathrm{P}, \mathrm{i}_{\mathrm{r}-1}}$ to $\mathrm{M}_{\mathrm{P}, \mathrm{r}}$.

## Reducing some class sizes:

Theorem 11: Let $t_{1}, t_{2}, \ldots, t_{s-1}$ be positive, even numbers $\ni \mathrm{t}_{1} \leq \mathrm{t}_{2} \leq \ldots \leq \mathrm{t}_{\mathrm{s}-1}$ and let f be a function on:

$$
\begin{array}{r}
\mathfrak{I}_{\mathrm{P}, \geq \mathrm{s}} \ni \mathrm{f}\left[\left(\binom{1, \mathrm{a}_{1}, \mathrm{a}_{2},}{\ldots, \mathrm{a}_{\mathrm{m}-1}}\right)\right]=\left(1, \mathrm{~h}_{1}, \mathrm{~h}_{2}, \ldots, \mathrm{~h}_{\mathrm{s}-1}, \mathrm{a}_{\mathrm{s}}, \mathrm{a}_{\mathrm{s}+1}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right) \\
\forall\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \in \mathfrak{J}_{\mathrm{P}, \geq \mathrm{s}}
\end{array}
$$

where:

$$
h_{i}=\left\{\begin{aligned}
a_{i} & \text { if } a_{i} \leq t_{i} \\
t_{i} & \text { if } a_{i}>t_{i}
\end{aligned}\right.
$$

for $\mathrm{i}=1,2, \ldots, \mathrm{~s}-1 ; \mathrm{m} \geq \mathrm{s}$.
f is a lattice homomorphism from $\mathfrak{I}_{\mathrm{P}, \geq \mathrm{s}}$ to I , where I is the ideal:

$$
\left\{\left(\left(1, a_{1}, a_{2}, \ldots, a_{m-1}\right)\right) \in \mathfrak{I}_{\mathrm{P}, \geq \mathrm{s}} \mid \mathrm{a}_{\mathrm{i}} \leq \mathrm{t}_{\mathrm{i}} ; \mathrm{i}=1,2,3, \ldots ., \mathrm{s}-1\right\}
$$

Of:

$$
\left(\mathfrak{I}_{\mathrm{P}, 2 \mathrm{~s}}, \leq_{\mathrm{s}}\right)
$$

Proof: $f$ is clearly a function. Also for any two elements A and B of:

$$
\begin{aligned}
& \mathfrak{J}_{\mathrm{P}, \geq \mathrm{s}} \ni \mathrm{~A}=\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \\
& \mathrm{B}=\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)
\end{aligned}
$$

$$
\begin{aligned}
&\left(\mathrm{m}^{\prime} \geq \mathrm{m}\right) \\
& \mathrm{f}(\mathrm{~A} \vee \mathrm{~B})= \mathrm{f}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \vee\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right] \\
&= \mathrm{f}\left[\left(\left(1, \max \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \max \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\},\right.\right.\right. \\
& \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \\
&\left.\left.\left.\max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}\right)\right)\right] \\
&=\left(\left(1, \mathrm{k}_{1}, \mathrm{k}_{2}, \ldots, \mathrm{k}_{\mathrm{s}-1}, \max \left\{\mathrm{a}_{\mathrm{s}}, \mathrm{~b}_{\mathrm{s}}\right\}, \max \left\{\mathrm{a}_{\mathrm{s}+1}, \mathrm{~b}_{\mathrm{s}+1}\right\},\right.\right. \\
& \ldots ., \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}}\right\}, \\
&\left.\left.\max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}+1}\right\}, \ldots,, \max \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right\}\right)\right)
\end{aligned}
$$

Where:

$$
\mathrm{k}_{\mathrm{i}}=\left\{\begin{array}{cc}
\max \left\{\mathrm{a}_{\mathrm{i}}, \mathrm{~b}_{\mathrm{i}}\right\} & \text { if } \max \left\{\mathrm{a}_{\mathrm{i}}, \mathrm{~b}_{\mathrm{i}}\right\} \leq \mathrm{t} \\
\mathrm{t}_{\mathrm{i}} & \text { if } \max \left\{\mathrm{a}_{\mathrm{i}}, \mathrm{~b}_{\mathrm{i}}\right\}>\mathrm{t}_{\mathrm{i}}
\end{array}\right.
$$

$$
(\text { for } \mathrm{i}=1,2, \ldots, \mathrm{~s}-1)
$$

$$
\begin{aligned}
= & \left(\left(1, \mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{s}-1}, \mathrm{a}_{\mathrm{s}}, \mathrm{a}_{\mathrm{s}+1}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \vee \\
& \left(\left(1, \mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{s}-1}, \mathrm{~b}_{\mathrm{s}}, \mathrm{~b}_{\mathrm{s}+1}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)
\end{aligned}
$$

Where:

$$
u_{i}=\left\{\begin{aligned}
a_{i} & \text { if } a_{i} \leq t_{i} \\
t_{i} & \text { if } a_{i}>t_{i}
\end{aligned}\right.
$$

$$
(\text { for } \mathrm{i}=1,2, \ldots, \mathrm{~s}-1)
$$

And:

$$
v_{i}=\left\{\begin{aligned}
b_{i} & \text { if } b_{i} \leq t_{i} \\
t_{i} & \text { if } b_{i}>t_{i}
\end{aligned}\right.
$$

$$
\begin{aligned}
& (\text { for } \mathrm{i}=1,2, \ldots, \mathrm{~s}-1) \\
& \therefore \mathrm{f}(\mathrm{~A} \vee B)=[\mathrm{f}(\mathrm{~A})] \vee[\mathrm{f}(\mathrm{~B})]
\end{aligned}
$$

Now:

$$
\begin{aligned}
\mathrm{f}(\mathrm{~A} \wedge \mathrm{~B})= & \mathrm{f}\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \wedge\left(\left(1, \mathrm{~b}_{1}, \mathrm{~b}_{2}, \ldots, \mathrm{~b}_{\mathrm{m}^{\prime}-1}\right)\right)\right] \\
& \mathrm{f}\left[\left(\left(\binom{1, \min \left\{\mathrm{a}_{1}, \mathrm{~b}_{1}\right\}, \min \left\{\mathrm{a}_{2}, \mathrm{~b}_{2}\right\},}{\ldots, \min \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}}\right)\right]\right. \\
= & \left(\left(1,1_{1}, \mathrm{l}_{2}, \ldots, 1_{\mathrm{s}-1}, \min \left\{\mathrm{a}_{\mathrm{s}} \mathrm{~b}_{\mathrm{s}}\right\}, \min \left\{\mathrm{a}_{\mathrm{s}+1}, \mathrm{~b}_{\mathrm{s}+1}\right\}, \ldots,\right.\right. \\
& \left.\left.\min \left\{\mathrm{a}_{\mathrm{m}-1}, \mathrm{~b}_{\mathrm{m}-1}\right\}\right)\right)
\end{aligned}
$$

Where:

$$
\begin{aligned}
& \mathrm{l}_{\mathrm{i}}=\left\{\begin{array}{cc}
\max \left\{\mathrm{a}_{\mathrm{i}}, \mathrm{~b}_{\mathrm{i}}\right\} & \text { if } \min \left\{\mathrm{a}_{\mathrm{i}}, \mathrm{~b}_{\mathrm{i}}\right\} \leq \mathrm{t} \\
\mathrm{t}_{\mathrm{i}} & \text { if } \min \left\{\mathrm{a}_{\mathrm{i}}, \mathrm{~b}_{\mathrm{i}}\right\}>\mathrm{t}_{\mathrm{i}}
\end{array}\right. \\
&\left.=\left(1, \mathrm{w}_{1}, \mathrm{w}_{2}, \ldots, \mathrm{w}_{\mathrm{s}-1}, \mathrm{a}_{\mathrm{s}}, \mathrm{a}_{\mathrm{s}+1}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right) \wedge \\
&\left(\left(1, \mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{s}-1}, \mathrm{~b}_{\mathrm{s}}, \mathrm{~b}_{\mathrm{s}+1}, \ldots, \mathrm{~b}_{\mathrm{m}-1}\right)\right), \\
&=[\mathrm{f}(\mathrm{~A})] \wedge[\mathrm{f}(\mathrm{~B})]
\end{aligned}
$$

Where:
$w_{i}= \begin{cases}a_{i} & \text { if } a_{i} \leq t_{i} \\ t_{i} & \text { if } a_{i}>t_{i}\end{cases}$
$(\mathrm{i}=1,2, \ldots, \mathrm{~s}-1)$
And:

$$
x_{i}= \begin{cases}b_{i} & \text { if } b_{i} \leq t_{i} \\ t_{i} & \text { if } b_{i}>t_{i}\end{cases}
$$

Where:
$(\mathrm{i}=1,2, \ldots, \mathrm{~s}-1)$
Corollary 12: Let $\mathrm{t}_{1}, \mathrm{t}_{2}, \ldots, \mathrm{t}_{\mathrm{s}-1}$, and I be as in Theorem 11. Also let:

$$
\mathrm{I}_{\mu}=\left\{\mu_{\mathrm{P}} \mid \mathrm{P} \in \mathrm{I}\right\}
$$

Define: $\psi$ on $\mu_{\mathrm{P}, \geq \mathrm{s}}$ by:

$$
\begin{aligned}
\psi\left[\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, . ., \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu}\right]= & \left(\left(1, \mathrm{~h}_{1}, \mathrm{~h}_{2}, \ldots, \mathrm{~h}_{\mathrm{s}-1}, \mathrm{a}_{\mathrm{s}}, \mathrm{a}_{\mathrm{s}+1}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu} \\
& \forall\left(\left(1, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{\mathrm{m}-1}\right)\right)_{\mu} \in \mathrm{M}_{\mathrm{P}, \geq \mathrm{s}}
\end{aligned}
$$

Where:

$$
h_{i}=\left\{\begin{aligned}
a_{i} & \text { if } a_{i} \leq t_{i} \\
t_{i} & \text { if } a_{i}>t_{i}
\end{aligned}\right.
$$

$(\mathrm{i}=1,2, \ldots, \mathrm{~s}-1) ; \mathrm{m} \geq \mathrm{s}$.
$\Psi$ is a lattice homomorphism from $\mathrm{M}_{\mathrm{P}, \geq \mathrm{s}}$ to $\mathrm{I}_{\mu}$.

## RESULTS AND DISCUSSION

We have shown that there exists various lattice homomorphisms from lattice of SK-partitions to lattices of SK-partitions and that similar relationships exist
between lattices of measures defined in term of SKpartitions.

This study furthers the study of systems of measures and relationships between such systems.

## CONCLUSION

Using the approach used in this study, it is possible to do further study of lattices of measures defined in terms of SK-partitions by investigating lattices of these partitions.
